EDUCATION

University of Utah, David Eccles School of Business <i>Master of Science in Information Systems</i> - CGPA: 3.78/4 - Relevant Courses: Advanced SQL, Web-Based Applications, Java Data Structures, Database Design.	Salt Lake City, UT Dec 2024
Vasavi College of Engineering - Osmania University <i>Bachelor of Engineering in Computer Science</i> - CGPA: 8.22/10 - Relevant Courses: Artificial Intelligence, Software Engineering, Data Structures and Algorithms, Database Management Systems, Operating Systems, Compiler Construction, Cloud Computing.	Hyderabad, India July 2022

TECHNICAL SKILLS

Programming: Java, Python, C#
Data & Backend: Spark, Snowflake, REST APIs, ASP.NET, .NET Core, Microservices
Databases: Snowflake, PostgreSQL, MongoDB
Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, GitHub Actions
Frontend: React, Vue.js, HTML, CSS
Cloud Platforms: AWS - EC2, S3, Lambda

EXPERIENCE

Goldman Sachs Software Engineering Analyst - Led migration of Spark-based financial calculators from an HDFS-backed datastore to Snowflake, redesigning data models and consolidating 10 legacy tables into 4, reducing storage footprint and improving query performance. - Designed and enforced schemas with primary keys over semi/unstructured data, enabling data integrity and reliable joins during the transition from structured to unstructured storage. - Replaced Alloy Services (HTTP/JSON APIs) with Snowflake UDTFs via the Spark-Snowflake connector, eliminating serialization and network overhead and reducing processing latency by ~50%, while enforcing compliant access controls.	Salt Lake City, Utah February 2025 - Present
University of Utah Graduate Teaching Assistant - Guided students in developing web-based applications by utilizing PHP for server-side scripting and MySQL for database management. - Provided hands-on demonstrations on designing responsive interfaces using HTML, CSS, and JavaScript. - Assisted students in debugging and optimizing their projects with a focus on industry best practices.	Salt Lake City, Utah August 2024 - December 2024
FactSet Research Systems Software Engineer - Led development of scalable cloud-based services using C#, ASP.NET, and .NET Core, improving system uptime by 90% through performance and reliability improvements. - Designed and implemented CI/CD pipelines with GitHub Actions and PowerShell, enabling seamless, zero-downtime deployments. - Reduced query response time by 40% through optimized database operations using PostgreSQL with advanced indexing. - Enhanced user experience by developing dynamic frontend interfaces with Bootstrap, HTML, and CSS	Hyderabad, India January 2022 - July 2023

PROJECTS

AXIO Centripetal Training Mobile App: Capstone project - Led a cross-functional team to define the technical roadmap, select the tech stack, and oversee database architecture, ensuring seamless collaboration and on-time delivery. - Successfully launched a mobile training app with Vimeo API integration and Firebase backend, achieving deployment on both the App Store and Play Store. - Tech Stack: FlutterFlow, Vimeo API, Vue.js, Vuetify, Firebase Firestore, Firebase Cloud Functions, HTML, CSS, JavaScript, TypeScript.	AppStore Play Store
LinkedIn Clone - Built a LinkedIn-like platform featuring scalable backend architecture (Spring Boot) and an interactive React front-end, leveraging real-time feed management and cloud-based deployments with Docker. - Designed a real-time feed management system to handle high volumes of posts and interactions efficiently. - Implemented secure user authentication with JWT and PostgreSQL, ensuring data integrity and performance. - Tech Stack: Spring Boot, Java, React.js, TypeScript, Vite, SCSS, JWT, PostgreSQL, Docker.	Repository

HONORS AND AWARDS

- Blue Ribbon Award:** Recognized as a top 10% performer at FactSet for leadership in optimizing CI/CD pipelines and resolving critical production issues.
- IEEE Coding Competition:** 2nd Prize for fast problem-solving among college students.
